Disease-related Malnutrition: An Evidence-based Approach to Treatment R J Stratton, C J Green, M Elia

Disease-related malnutrition is a global public health problem. The consequences of disease-related malnutrition are numerous, and include shorter survival rates, lower functional capacity, longer hospital stays, greater complication rates, and higher prescription rates. Nutritional support, in the form of oral nutritional supplements or tube feeding, has proven to lead to an improvement in patient outcome. This book is unique in that it draws together the results of numerous different studies that demonstrate the benefits of nutritional support and provides an evidence base for it. It also discusses the causes, consequences, and prevalence of disease-related malnutrition, and provides insights into the best possible use of enteral nutritional support.
