Membrane Reactors for Energy Applications and Basic Chemical Production (Woodhead Publishing Series in Energy)

Membrane Reactors for Energy Applications and Basic Chemical Production presents a discussion of the increasing interest in membrane reactors that has emerged in recent years from both the scientific and industrial communities, in particular their usage for energy applications and basic chemical production.

Part One of the text investigates membrane reactors for syngas and hydrogen production, while Part Two examines membrane reactors for other energy applications, including biodiesel and bioethanol production.

The final section of the book reviews the use of membrane reactors in basic chemical production, including discussions of the use of MRs in ammonia production and the dehydrogenation of alkanes to alkenes.

- Provides comprehensive coverage of membrane reactors as presented by a world-renowned team of experts
- Includes discussions of the use of membrane reactors in ammonia production and the dehydrogenation of alkanes to alkenes
- Tackles the use of membrane reactors in syngas, hydrogen, and basic chemical production
- Keen focus placed on the industry, particularly in the use of membrane reactor technologies in energy
