Proceedings of the American Institute of Electrical Engineers Volume 28 American Institute of Engineers

This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1909 Excerpt: ...powerfactor at the generator was practically 100 per cent. In some calculations the load was leading, in others lagging. Calculations were made with half the capacity concentrated at each end and also, according to Dr. Steinmetz' recommendation, with one sixth of the capacity at each end and two thirds in the middle. The calculated results based on both of these assumptions were not materially different. J. B. Whitehead (by letter): The use of approximate formulas should invariably be safeguarded by consideration: first, of the range of values within which the approximation holds true, and the magnitude of variation due to the correcting factors without this range; and, secondly, ' the degree to which experiment and experience has shown the approximate formulas to be sufficiently correct. The author of these papers has performed a valuable service in presenting his wave formulas as checks upon the use of the split-capacity formula. Considering his comparison of the two types of formula as given in Table I, one is surprised and rather relieved to find the small differences that are involved. It should be pointed out, however, that the author has considered ohmic resistance, inductance, and capacity only. The losses between lines, over insulators, and in other kindred phenomena have been neglected. These losses would appear as a conductance or parallel connected resistances in the development of a formula taking them into account. The suggestion of the author to subdivide the individual wires of the line into several others would naturally lead to an increase in the insulator loss, and without further modification would also lead to circulating or secondary currents in the several branches of one line due to inductive action of the others. My feeling after rea...

From reader reviews:

Coleman Jones:

The book Proceedings of the American Institute of Electrical Engineers Volume 28 make one feel enjoy for your spare time. You may use to make your capable a lot more increase. Book can for being your best friend when you getting anxiety or having big problem with the subject. If you can make reading a book Proceedings of the American Institute of Electrical Engineers Volume 28 being your habit, you can get far more advantages, like add your own capable, increase your knowledge about many or all subjects. You are able to know everything if you like open up and read a e-book Proceedings of the American Institute of Electrical Engineers Volume 28. Kinds of book are several. It means that, science publication or encyclopedia or other folks. So , how do you think about this publication?

Maria Davis:

This Proceedings of the American Institute of Electrical Engineers Volume 28 book is just not ordinary book, you have after that it the world is in your hands. The benefit you receive by reading this book is usually information inside this book incredible fresh, you will get details which is getting deeper anyone read a lot of information you will get. This kind of Proceedings of the American Institute of Electrical Engineers Volume 28 without we comprehend teach the one who looking at it become critical in thinking and analyzing. Don't possibly be worry Proceedings of the American Institute of Electrical Engineers Volume 28 can bring whenever you are and not make your carrier space or bookshelves' become full because you can have it in your lovely laptop even cellphone. This Proceedings of the American Institute of Electrical Engineers Volume 28 having very good arrangement in word in addition to layout, so you will not truly feel uninterested in reading.

Daniel Starnes:

Information is provisions for people to get better life, information today can get by anyone with everywhere. The information can be a know-how or any news even a huge concern. What people must be consider when those information which is within the former life are challenging be find than now's taking seriously which one would work to believe or which one the actual resource are convinced. If you receive the unstable resource then you get it as your main information it will have huge disadvantage for you. All those possibilities will not happen within you if you take Proceedings of the American Institute of Electrical Engineers Volume 28 as the daily resource information.

Bertha Morrison:

This Proceedings of the American Institute of Electrical Engineers Volume 28 is great guide for you because the content which can be full of information for you who have always deal with world and get to make decision every minute. This kind of book reveal it details accurately using great arrange word or we can claim no rambling sentences included. So if you are read this hurriedly you can have whole info in it. Doesn't

mean it only will give you straight forward sentences but hard core information with wonderful delivering sentences. Having Proceedings of the American Institute of Electrical Engineers Volume 28 in your hand like having the world in your arm, data in it is not ridiculous one. We can say that no publication that offer you world throughout ten or fifteen tiny right but this publication already do that. So , this is good reading book. Hi Mr. and Mrs. active do you still doubt that will?
