Lectures in Abstract Algebra: III. Theory of Fields and Galois Theory (Graduate Texts in Mathematics) N. Jacobson

The present volume completes the series of texts on algebra which the author began more than ten years ago. The account of field theory and Galois theory which we give here is based on the notions and results of general algebra which appear in our first volume and on the more elementary parts of the second volume, dealing with linear algebra. The level of the present work is roughly the same as that of Volume II. In preparing this book we have had a number of objectives in mind. First and foremost has been that of presenting the basic field theory which is essential for an understanding of modern algebraic number theory, ring theory, and algebraic geometry. The parts of the book concerned with this aspect of the subject are Chapters I, IV, and V dealing respectively with finite dimensional field extensions and Galois theory, general structure theory of fields, and valuation theory. Also the results of Chapter III on abelian extensions, although of a somewhat specialized nature, are of interest in number theory. A second objective of our account has been to indicate the links between the present theory of fields and the classical problems which led to its development.

From reader reviews:

Ashley Parra:

Do you have favorite book? For those who have, what is your favorite's book? Guide is very important thing for us to learn everything in the world. Each guide has different aim or even goal; it means that guide has different type. Some people feel enjoy to spend their time and energy to read a book. They may be reading whatever they take because their hobby is definitely reading a book. Consider the person who don't like reading a book? Sometime, man feel need book whenever they found difficult problem as well as exercise. Well, probably you should have this Lectures in Abstract Algebra: III. Theory of Fields and Galois Theory (Graduate Texts in Mathematics).

Kevin Miller:

Book will be written, printed, or illustrated for everything. You can know everything you want by a guide. Book has a different type. We all know that that book is important factor to bring us around the world. Alongside that you can your reading ability was fluently. A book Lectures in Abstract Algebra: III. Theory of Fields and Galois Theory (Graduate Texts in Mathematics) will make you to become smarter. You can feel much more confidence if you can know about every little thing. But some of you think which open or reading some sort of book make you bored. It's not make you fun. Why they might be thought like that? Have you searching for best book or ideal book with you?

Timothy Rhine:

The book Lectures in Abstract Algebra: III. Theory of Fields and Galois Theory (Graduate Texts in Mathematics) will bring you to the new experience of reading a book. The author style to explain the idea is very unique. In case you try to find new book to learn, this book very acceptable to you. The book Lectures in Abstract Algebra: III. Theory of Fields and Galois Theory (Graduate Texts in Mathematics) is much recommended to you to study. You can also get the e-book from official web site, so you can more easily to read the book.

Lisa Robinson:

As a scholar exactly feel bored to reading. If their teacher expected them to go to the library or make summary for some publication, they are complained. Just very little students that has reading's internal or real their passion. They just do what the professor want, like asked to the library. They go to presently there but nothing reading significantly. Any students feel that studying is not important, boring and can't see colorful photographs on there. Yeah, it is to be complicated. Book is very important in your case. As we know that on this period of time, many ways to get whatever we want. Likewise word says, ways to reach Chinese's country. Therefore this Lectures in Abstract Algebra: III. Theory of Fields and Galois Theory (Graduate Texts in Mathematics) can make you sense more interested to read.
